greenplate dieboard

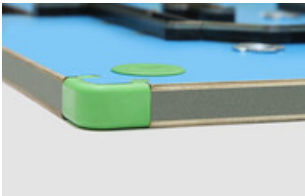

THE ENVIRONMENTALLY FRIENDLY ONE.

The Marbach greenplate distinguishes itself through ecological sustainability. It consists of 30% of the primary resource – birch wood. 70% are made from environmentally friendly secondary material, from the sustainable forest industry. The greenplate is subject to only minimal height tolerances. For that reason it is a great choice for applying embossings. And braille. Due to its flatness, all ejection rubber is perfectly leveled in height. For optimal pressure conditions.
