

for blanking station

universal sheet delivery

With the universal sheet delivery, the sheet delivery of die-cutters is enhanced in such a way that the delivery of the paperboard sheets can be quickly and easily adapted to each individual job. And usually without removing the upper part of the sheet delivery. A great time advantage for the machine operators.

The Marbach system is particularly useful for small orders or orders that are not blanked. It can also be combined with a guillotine so that it can be used flexibly according to the user's requirements. For machines in format 102-106 or 142-145.
