

Special tools.

Solid steel tool.

THE SOLID ONE.

For thick materials, your tool needs very special equipment. It must be dimensionally stable. And must have robust knives. That's why we have full steel tools in our portfolio. With integrated ejector technology. The knives of these tools are milled from steel. Ideally suited for thick material. They can be re-sharpened at any time. For a long service life. No matter what you want to die-cut. ETC floor coverings. Tile coverings. Or other types of plates. With the solid cutting knives of the Marbach solid steel tools you can also die-cut thick materials without any problems. Not only for straight contours. But individually adapted to your requirements.

dimensionally stable tool

high durability

integrated ejector technology
