## Pharma tools

### THE HYGIENIC ONE.

When it comes to tools for the pharmaceutical industry, hygiene is of the utmost importance. And precision. We supply tools for a wide range of applications in the pharmaceutical industry. For die-cutting pill blisters. Surgery accessories. Labels. And band-aids. With and without active ingredients.

Depending on requirements, the dieboard can be made of PMMA. Solid steel. Or anodized aluminum. If required with wire-eroded contours. Equipped with special FDA-certified materials. High-precision manufacturing. For process reliability. Best hygiene. And for use in clean room environments.
