

Special tools.

Extraction tool.

THE SAFE ONE.

The smooth stripping and safe disposal of cutting waste plays an important role in the die-cutting process. We at Marbach have the right solution for you. Our extraction tools ensure maximum safety. Directly integrated into the die-cutting process. Through permanent or intervall extraction.

The tool is designed so that waste is cut through. In the tool, integrated hole cuttings lead the waste into an designated waste container. This can then be easily extracted. Safe and fast. For waste-free products.
