## Aluminum tool with heating coil.

### THE TEMPERED ONE.

There are many different requirements for die-cutting. Especially when cutting certain materials such as plastic. Marbach aluminum tools can be equipped with heating coils. To heat the tool exactly to the desired temperature. Directly during the cutting process. In this way, the desired contours can be die-cut without any problems. With low cutting pressure. Completely without edge overlaps. For an extremely clean cut. And best cutting results.
