

minimal set-up times

Digital zone levelling DZL|plate

The highest level of patching.

The die cutting machine is subject to wear-related deviations. This is not unusual. But for you this means, that with every job, you have to do a labor intensive zone make-ready. Marbach has the optimal solution for you. Digital zone levelling. All you need from us is a special grid die and a pressure sensitive foil. Make an impression. And send the foil back to Marbach. We will calculate the height profile of the machine. And print it onto a vetronite plate. Individually made for your machine. Levelling out the height deviations of the cutting platen. For machines in all formats, [for large-format corrugated machines, there is the DZL|plateXL.](#)

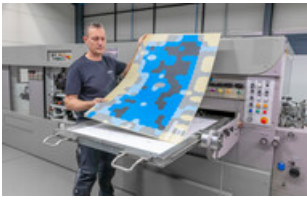

levelling of machine-related deviations

save make-ready time by avoiding an additional zone make-ready

quick and easy to do

Calculator digital zone levelling

machine cost per hour	<input type="text" value="150"/>	euro
number of new make-readies per month	<input type="text" value="10"/>	piece
time savings for each new make-ready	<input type="text" value="15"/>	minutes
time savings per month	<input type="text"/>	hours
potential savings per month	<input type="text"/>	euro
Investment digital zone levelling	<input checked="" type="radio"/> DZL plate (format 102-106): 2.900 Euro <input type="radio"/> DZL plate (format 130 -145): 4.900 Euro <input type="radio"/> DZL plate (format 162): 5.200 Euro	
paid off after	<input type="text"/>	months
