

For rotary corrugated board tools

Rotary tools Performance | CPS-R

Rotary tools Performance represent our defined standard in rotary corrugated board processing. With this product, your tools will perform optimally—reliably, efficiently, and reproducibly. The basis for this is the CPS-R [Corrugated Performance System-Rotary], which offers you a uniform standard for maximum performance. In addition, all tools are produced with our proven **Marbach marbaject rubbering**, which ensures maximum service life, consistent quality, and process reliability.

The CPS-R is a standardized high-performance system for the rotary processing of corrugated board. It guarantees stable, durable, and economical die-cutting processes—regardless of machine type or production location. Thanks to precise laser technology, high-quality materials, and clearly defined assembly specifications, the tools run reliably right from the start. The perfectly coordinated components reduce set-up times and increase machine availability in the long term.

With Rotary Tools Performance, you achieve dimensionally accurate, waste-free packaging and consistently high die-cutting quality over many applications. The structured system design makes the CPS-R your standard and facilitates integration into existing processes – for efficient, safe and economical production.

The system is also available as a CPS in a flat format.

Maximum productivity
