More Information

BLANKING.
BEST PERFORMANCE IN THE BLANKING PROCESS.

Machine blanking is becoming increasingly important in packaging production. If blanks are separated precisely and stacked neatly after die-cutting, subsequent processes such as folding, gluing, and packaging run much more smoothly. At the same time, the productivity of the die-cutting machine increases significantly through the use of the blanking station. With the right technology, you can achieve maximum efficiency, high machine speeds, and reliable further processing.

compactblanker.
The solid one.

The compact classic made of steel – solid, durable, and in proven Marbach quality.

YOUR ADVANTAGES:
- / solid and massive steel construction
- / custom design
- / fast production process

lightblanker.
The flexible one.

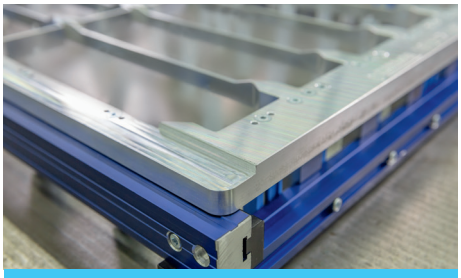
Modular blanking tool with base frame that remains in the machine and can be quickly adapted to new orders.

YOUR ADVANTAGES:
- / flexible
- / fast set-up
- / automated instead of manual blanking

marbablanker.
The efficient one.

Lightweight and stable blanking tool designed for fast and reliable blanking.

YOUR ADVANTAGES:
- / for every application
- / light and stable
- / smooth blank separation



alublanker.
The precise one.

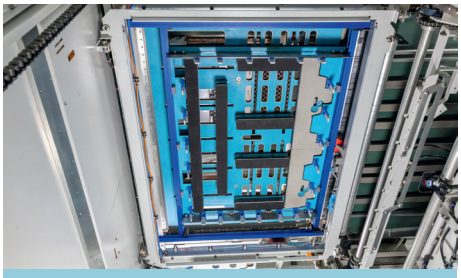
CNC-machined aluminum blanking tool for particularly precise and efficient blanking.

YOUR ADVANTAGES:
- / Low weight
- / Efficient
- / Optimized handling

wireblanker.
The innovative one.

Special blanking solution for rectangular beverage carrier blanks, where a double knife gutter parallel to the gripper is not required. An double knife gutter in running direction of the machine is still necessary.

YOUR ADVANTAGES:
- / Optimal stacking
- / Reduced marks on the blank
- / Material savings



Universal sheet delivery.
The variable one.

The universal sheet delivery allows you to quickly adapt the sheet delivery to different jobs – especially for small jobs or jobs without blanking.

YOUR ADVANTAGES:
- / fast and easy
- / without removing the upper part of the sheet delivery
- / flexible
