

Innovation in honeycomb board die-cutting.

Die-cutting on both sides –  
twice as efficient, uniquely smart.

**NEW:**  
Honeycomb  
board – die-cutting  
from both sides!

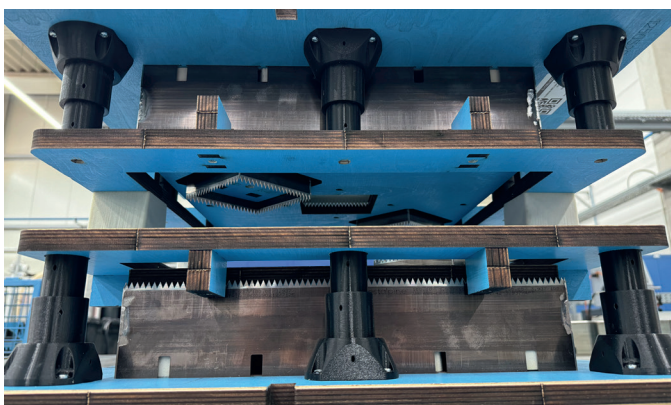

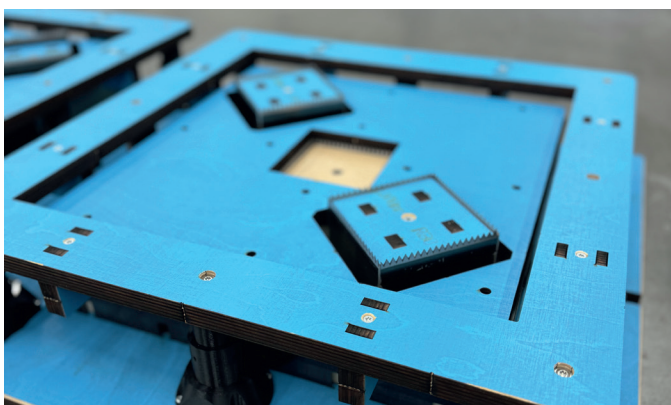

Teaser

**INNOVATION IN HONEYCOMB BOARD DIE-CUTTING.**

DIE-CUTTING HONEYCOMB BOARD FROM TWO SIDES  
AT ONCE – FOR MAXIMUM PRECISION AND EFFICIENCY.

With our latest, patented development, we are setting new standards in the field of honeycomb board die-cutting. The innovative two-sided die-cutting technology enables simultaneous die-cutting and embossing from above and below – for even greater performance, precision, and cost-effectiveness!

## TWO TOOLS – ONE PROCESS.

The innovative technology for fast and precise die-cutting of honeycomb board.

Honeycomb board poses particular challenges during the die-cutting process, as its high material thickness makes it difficult to cut through, and until now, multiple steps were required—involving significant effort and often yielding imprecise results. With Marbach's solution, die-cutting becomes easier, faster, and more precise: The material is processed on both sides in a single step, allowing for reliable and precise handling.

### YOUR ADVANTAGES:

- / **Die-cutting even thicker materials:** Even particularly thick honeycomb board can be processed reliably.
- / **Consistent cutting quality:** Precise die-cutting for clean, straight edges.
- / **Embossing possible on both sides:** Embossing on both sides in a single pass saves time.
- / **No anvilpad required:** The upper and lower dies eliminate the need for an additional anvil.
